DISTRICT CENSUS HANDBOOK
1951

FARRUKHABAD DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies. The printing of the District Census Handbooks involves colossal work and is bound to take some time.

RAJESHWARI PRASAD, I.A.S.,

Superintendent, Census Operations,

Uttar Pradesh.

RAMPUR:

December 31, 1954.

INTRODUCTION

A—THE DISTRICT

1. The district of Farrukhabad lies along the Ganga which forms its northern and eastern boundary. On the west of the district are Etah and Mainpuri, on the south and south-east are Etawah and Kanpur, on the east is HarDOI and on the north are Shahjahanpur and Budaun. The district has a total area of 1,607 square miles which is less than the average district area of the State. Its population in 1951 was about 10·9 lakhs. It has 4 tehsils, 16 parganas and 18 thanas.

2. The district is level plain varied only by a few gentle undulations and by the slopes, sometimes gradual and sometimes abrupt, which lead down to the river valleys. The only marked variation of level is between the two divisions in which the district naturally falls—the upland, or *bangar* which is a continuation of the *Doab* plain, and the lowland, or *tarai*, cut away from the upland by the erosive action of the rivers. The *bangar* and the *tarai* are to be found in all the tehsils. In tehsil Farrukhabad the Ganga *tarai* is not very extensive and is separated from the *bangar* by sharply defined cliff. In tehsil Kaimganj the *tarai* has been formed by the erosive action of the Ganga and is sometimes covered by its waters. Most of the tehsil constitutes the watershed between the Ganga and the Bagar, and the country south of the latter has strongly marked *usar* characteristics. Tehsil Kannauj is divided into upland and lowland of the three rivers, the Ganga, the *Kali Nadi* and the Isan. The ravines are overgrown with *sarpat* grass while it is always liable to the ravages of *kans* and *dab*. In tehsil Chhibramau the whole tract consists of *bangar* or upland and *tarai* or the lowland adjoining rivers Ganga and Isan. The Isan country consists of a belt of *tarai* land, followed on the south by a belt of *bhur* broken up by erosion in many places into a net work of ravines. The Ganga *tarai*, which is marked off from the *bangar* by a stiff abrupt cliff, is very small and contains no cultivation. Several large stretches of *dhak* jungle are to be found.

The Ganga is the main drain into which all the rivers fall with a general course from west to east, the smaller drainage channels in their turn running generally north and south from the watersheds of the rivers. The principal rivers and streams are Ganga, Ram Ganga, *Kali Nadi*, Isan, Burh Ganga, Bagar, Pandu and the Rind. Of these the first four alone are perennial, the rest being mere channels for the escape of surplus drainage and ceasing to flow soon after the close of the monsoon. Though the Ganga is constantly changing its course its movements from side to side are for the most part slow and gradual with a tendency to continue in one direction for many years together. When swollen by rains Ram Ganga frequently floods the lowlands and leaves behind a sterile deposit of sand. *Kali Nadi* forms the border of Farrukhabad and Mainpuri. There are a number of lakes and *jhils*. In Chhibramau tehsil Talgram pargana contains no less than eight large *jhils*. In Kannauj tehsil pargana Tirwa has also a large number of important *jhils*.

3. Throughout the district the soils are divided into three natural classes of *dumat* or loam, *matiyar* or clay and *bhur* or sand. But though the same nomenclature is employed for both the upland and the lowland soils, they differ greatly in character. In the upland the names have the same meaning as elsewhere in the *Doab*. *Dumat* is a fertile loam which is soft to the touch when powdered. *Bhur* is a sandy soil, rough to the touch. *Matiyar* is the stiff clay which ordinarily grows rice in the rains; when dry it splits into fissures and becomes as hard as baked brick. But in *tarai* the soil is everywhere alluvial, consisting of a stratum of loam of varying thickness more or less intermixed with sand overlying a bed of white river sand. When the admixture of sand is large it is known as *bhur*, when rice is commonly grown on it it is called *matiyar* while in other cases it is classified as *dumat*. In the Ganga *tarai* this layer of loam is generally not more than two to four feet in depth, where it is known as *papar*, but it thickens and improves in quality towards the cliff, receiving in Kannauj tehsil the special name *kachoha*.

4. The figures of the classification of the area during the last fifty years are given in Table 2 of Part III of this volume. The proportion of the area under the various categories works out as follows for 1950-51 :

	Actual figures (in acres)	Percentage
Cultivated area	681,613	64·3
Cultivable waste (excluding current fallow)	168,812	15·9
Current fallow	40,457	3·8
Forest	2	0·0
Area not available for cultivation of which—	169,624	16·0
(a) Covered with water	51,827	4·9
(b) Under sites, roads and buildings	30,184	2·8
(c) Barren	87,613	8·3

The figure in the above table regarding culturable waste taken from the Season and Crop Report is, however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	170,923	100
A—Area under culturable waste land not available for immediate cultivation	53,712	31.42
(i) Forest under any legal enactment	70	0.04
(ii) Groves	32,821	19.20
(iii) Forests of timber trees	142	0.08
(iv) Thatching of grasses, shrubs and bushes	13,501	7.90
(v) Land kept for grazing	7,178	4.20
B—Area under culturable waste land for immediate cultivation but could not be cultivated	62,832	36.76
Of which due to—		
(i) <i>Kans</i> growth	143	0.08
(ii) Threshing floors	180	0.11
(iii) Malaria
(iv) Floods	2,092	1.22
(v) Lack of drains	53	0.03
(vi) Lack of water	27,572	16.13
(vii) Distance from <i>abadi</i>	248	0.15
(viii) Damage from wild animals	855	0.50
(ix) Other causes	31,689	18.54
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against B	54,379	31.82

From the above it will appear that of the total area recorded as cultivable waste, only 31.8 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 81.5 cents of which 66.1* cents have already been brought under cultivation and only about 5.0 cents can be further brought under the plough after some improvements. It is obvious that the saturation point for cultivation has already been reached in the district.

Climate and rainfall

5. The average rainfall for the last quinquennium was about 40 inches. During the last 45 years the rainfall has been less than 20 inches in only 3 years—1918-19 when it was 11.1 inches, 1928-29 when it was 15.5 inches and in 1937-38 when it was 17.6 inches. The climate of the upland portion is one of the healthiest in the *Doab* but the lowlands, specially the Khakhatmau, Amratpur, and Prannagar parganas are notoriously feverish and unhealthy. During the cold weather the air is dry and wholesome and the nights are cold, slight frosts being not uncommon. In the summer months the wind develops into *loo*. With the breaking of the monsoon the temperature falls, the hot west wind ceases to blow and the intense dryness of the summer air is changed to a close and oppressive dampness which continues till the rains cease.

Irrigation

6. Irrigation is derived from canals, wells and other natural reservoirs. In 1950-51 the irrigated area from wells (including tube wells) covered 50.5 per cent., by canals 44.0 per cent. and by other sources 5.5 per cent. There is a large area of land in the lowlands which is flooded every year during the rains, when it absorbs so much moisture that no further watering is needed to enable it to bear crops like wheat which elsewhere require irrigation.

Crops

7. *Rabi* and *kharif* crops occupy nearly the same area. The area under *rabi* in 1950-51 was 397,732 acres and that under *kharif* 397,835 acres. The area under *zaid* crops was 15,074 acres. The principal *kharif* crop is *juar* which is grown to some extent alone but more generally in combination with *arhar* followed by maize and *bajra*, while the principal *rabi* crop is wheat grown singly and in combination with barley or gram followed by gram. Sugarcane has never been a very important crop of the district.

*This figure also includes the area classed as current fallow.

B—ANALYSIS OF THE STATISTICS

1. The table below shows the two basic figures—land area and population—and the derived figures of land area per capita: Population :
General distribu-
tion and density

Tehsil	Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area per capita
Chhibramau	2.54	608	2.68	1.05
Farrukhabad	3.80	782	3.10	0.82
Kaimganj	2.14	589	2.33	1.09
Kannauj	2.45	623	2.51	1.03
Farrukhabad district	10.93	658*	10.62	0.97

This district though forty first in order of area stands thirty-first in the State in respect of population. Its density is 658 while that of the State is only 557. Density of tehsil Farrukhabad has been inflated by the presence of Farrukhabad city. The rural density of the district is 577 per square mile the density of the rural parts of the tehsils being: Chhibramau 581, Farrukhabad 614, Kaimganj 540 and Kannauj 560. (*Vide* Tables A-I and E)

2. The population of the district in 1951 was only 20.3 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades : Growth of popu-
lation

Census year	Population			Variation		
	Total	Rural	Urban	Total	Rural	Urban
1901 ..	908,207	782,308	125,899
1911 ..	883,028	767,301	115,727	—25,179 (—2.8)	—15,007 (—1.9)	—10,172 (—8.1)
1921 ..	840,470	739,199	101,271	—42,558 (—4.8)	—28,102 (—3.7)	—14,456 (—12.5)
1931 ..	878,268	763,926	114,342	+37,798 (+4.5)	+24,727 (+3.3)	+13,071 (+12.9)
1941 ..	955,573	830,081	125,492	+77,305 (+8.8)	+66,155 (+8.7)	+11,150 (+9.8)
1951 ..	1,092,641	952,776	139,865	+137,068 (+14.3)	+122,695 (+14.8)	+14,373 (+11.5)

A noteworthy feature is that between 1901 and 1921 the population of the district recorded a decrease of 7.5 per cent. when that of the State decreased by 4.0 per cent. only. The district suffered from epidemic malaria of 1908. Plague caused a great deal of loss during 1911—21. It suffered from influenza of 1918-19. During 1921—31 its population increased less than the State average. It was partly due to heavy plague mortality and partly to emigration. Abnormal deaths were prevented from occurring since then. The population of the district recorded an increase of 30.0 per cent. since 1921 against an increase of only 35.5 per cent. in the population of the State during the same period.

The variation in the population of the tehsils during 1941—51 is shown in the marginal

Tehsil	Percentage variation 1941—51
Farrukhabad district	+14.3
Chhibramau	+14.0
Farrukhabad	+17.9
Kaimganj	+11.5
Kannauj	+11.9

table. In Farrukhabad tehsil the larger increase is due to Farrukhabad city and that in Chhibramau is due to the extension of Chhibramau town.

3. Births and deaths mainly account for the trends in population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death-rates and the calculated natural increase and the population growth The Vital Statis-
tics

*According to the area given by the Surveyor General, it is 680.

rates of the last three decades for the district as a whole and for its rural and urban areas :

			Total	Rural	Urban
<i>Mean decennial birth-rate</i>					
1941—50	25·5	25·1	28·4
1931—40	37·8	38·5	33·3
1921—30	39·0	40·5	28·5
<i>Mean decennial death-rate</i>					
1941—50	17·9	17·4	20·9
1931—40	25·2	25·3	24·7
1921—30	33·3	34·3	26·1
<i>Mean decennial rate of natural increase</i>					
1941—50	7·6	7·7	7·5
1931—40	12·6	13·2	8·6
1921—30	5·7	6·2	2·4
<i>Mean decennial growth-rate</i>					
1941—50	13·4	13·8	10·8
1931—40	8·5	8·4	9·3
1921—30	4·4	3·3	12·1

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Both birth and death rates have fallen during the last decade.

The figures of natural increase and growth-rate suggest loss of population by migration during 1921—30 and 1931—40 and gains during 1941—50.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes							Number of deaths	Percentage of total deaths
Fever	14,970	81·7
Dysentery and diarrhoea	290	1·6
Respiratory diseases	420	2·3
Plague, cholera and small-pox	569	3·1
Others	2,065	11·3

As in the rest of the State ' fever ' is responsible for the majority of deaths. But fever covers a number of ailments which the reporters are unable to identify. (*Vide* Table I, Part III of this volume)

Migration.

4. About 88 per cent. of the people enumerated in the district at the census of 1951 were born there, 11·5 per cent. were born in other districts of the State, 0·4 per cent. were born in other parts of India and only 0·2 per cent. came from other countries. Of the immigrants from the districts of the State as many as 69,874 (males 17,811, females 52,063) are from the other districts of the same natural division and 55,309 (males 11,549, females 43,760) are from other parts of the State. Most of the migration from the neighbouring districts is marriage migration. Of 3,909 immigrants from the adjacent States 1,393 (males 846, females 547) are from Rajasthan, and 1,112 (males 829, females 283) are from Punjab.

Of the immigrants who have come from territories beyond India, 2,378 (males 1,316, females 1,062) were born in Pakistan and 70 (males 38, females 32) had their birth-place in other territories. The Pakistan-born are the displaced persons who number 2,186. Of the immigrants born in other territories 41 (males 27, females 14) are Nepal-born.

Of the 11 non-Indian nationals all are Americans.

Unfortunately the figures of emigration are not available. The Vital Statistics as they are suggest a loss of about 11,000 during 1921—30 and of about 38,000 during 1931—40. The district appears to have gained about 59,000 persons during 1941—50. But it should be in mind that these figures include an element of registration error also. (*Vide* Tables D-VI)

5. We may now analyse the growth of population in the district during the last thirty

Census year	Population*	Net area sown (in acres)	Area of cultivation <i>per capita</i> (in cents)
1921 ..	856,633	629,723	73.6
1931 ..	877,392	586,169	66.8
1941 ..	955,377	624,093	65.5
1951 ..	1,092,641	660,751	60.5

years in relation to the growth of cultivation during the same period. (Figures of area shown under census years are quinquennial averages for the five years ending with the crop year immediately preceding the census year). It is obvious that cultivation has failed to keep pace with population. The cultivated area *per capita* has gone down to 60.5 cents in 1951 from 73.6 cents in 1921. The magnitude of this drop is about one-fifth of the 1921 level. It means that (other things being equal) every man, woman and child must expect

Decline of cultivation *per capita*.

to get less food and other agricultural produce from the land in 1951 than in 1921.

6. It may be examined whether this shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilisation and better culture. The average (quinquennial) area sown more than once was 138,583 acres in 1921. It decreased to 115,770 acres in 1931. There was a slight increase to 127,035 acres in 1941 and again there was a small increase to 139,185 acres in 1951. The figures of double crop cultivation *per capita* in cents are as below :

Double cropped area *per capita*

		Quinquennial average for the year preceding			
Particulars		1951	1941	1931	1921
Double crop cultivation <i>per capita</i> in cents	12.7	13.5	13.2	16.2
Unirrigated double crop cultivation <i>per capita</i> in cents	10.2	9.2	9.4	11.8
Irrigated double crop cultivation <i>per capita</i> in cents	2.5	4.3	3.8	4.4

The double cropped area per capita has been steadily declining since 1921 except for 1941 when as compared to 1931 it was almost stationary.

7. The average area irrigated in the district was 231,458 acres in 1921. The figures were 181,634 acres in 1931, 213,032 acres in 1941 and 195,351 acres in 1951. The average area irrigated more than once was 37,349 acres in 1921, 33,392 acres in 1931, 41,053 acres in 1941 and 27,453 acres in 1951.

Irrigated area *per capita*.

The figures of irrigation *per capita* are shown in the table below :

		Years			
Particulars		1951	1941	1931	1921
Irrigated single crop cultivation <i>per capita</i> in cents	15.4	18.0	16.9	22.7
Irrigated double crop cultivation <i>per capita</i> in cents	2.5	4.3	3.8	4.4

The trend is distinctly towards a decline.

8. It is also significant that inspite of the rapid growth of population there has been almost no change in the cropping pattern of the district. During the quinquennium 1916—21 88.5 per cent. of the cropped area was under food crops and only 11.5 per cent. of it was under non-food crops. Thirty years after, during 1946.51 the cropped area under food crops was 89.8 per cent. and that under non-food crops was 10.2 per cent.

Cropped area

The proportionate area under different crops between 1911 and 1951 was as below :

			Percentage of cropped area under								
Quinquennial average of			Total cropped area	Rice	Wheat	Barley	Juar	Bajra	Maize	Gram	Others
1911—16	767,330	2.8	21.1	14.0	9.6	10.9	8.2	10.2	23.2
1916—21	745,382	4.7	18.9	13.4	9.9	10.3	8.9	9.8	24.1
1921—26	745,104	4.8	19.9	11.9	10.5	8.7	7.4	14.8	22.0
1926—31	708,087	4.1	21.8	12.3	11.1	7.2	9.5	11.0	23.0
1931—36	726,321	3.4	22.3	10.5	12.0	7.5	9.0	12.5	22.8
1936—41	753,261	4.2	22.4	9.0	10.6	6.8	9.6	13.4	24.0
1941—46	769,100	4.1	21.7	9.3	11.1	8.4	10.4	14.4	20.6
1946—51	803,589	5.9	21.3	9.7	11.4	6.8	8.9	13.7	22.3

*The figures of population of the various censuses relate to the then lay-out of the district.

Cotton, indigo and opium are the three non-food crops which have been declining. In 1901-02 the area under cotton-crop was 21,431 acres ; in 1950-51 it was only 577 acres. In 1901-02 the area under indigo was 7,368 acres and in 1950-51 it was only 16 acres. The area under opium in 1901-02 was 19,603 acres, where as in 1950-51 it was nil. The area under sugar-cane has been increasing. In 1901-02 the area under sugar-cane was 14,602 acres while in 1950-51 it was 36,934 acres.

Live-stock, ploughs and carts

9. Live-stock in this country live for a large part of the year on the by-products of agriculture supplemented by green fodder crops. They have, therefore, to be co-related not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III the total number of cattle and buffaloes which had decreased between 1935 and 1944 has recorded an increase during 1944-51 from 51 lakhs to about 5.34 lakhs.

The number of working cattle and buffaloes in the district was 1.68 lakhs in 1935, 1.77 lakhs in 1944 and 1.92 lakhs in 1951. The number of ploughs had gone up from 84.7 thousands in 1935 to 89.8 thousands in 1944 and again it has increased to 102.6 thousands in 1951. This is apparently due to progressive fractionalisation of holdings. The number of carts started rising since 1930 and now stands at 27.5 thousands. The average net cultivation area per plough works out to 6.6 acres in 1951 as against 7.9 acres in 1920 and the average net cultivated area per pair of working cattle works out to 7.1 acres in 1951 as compared with 7.4 acres in 1935. Breeding cows and she-buffaloes which fell from 177.9 thousands to 175.6 thousands during 1935-44 have gone up to 186.6 thousands in 1951. The cows and female buffaloes in milk per 1,000 of human population were about 32 and 47 respectively. Owing to the poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep which had been almost stationary at about 30,000 for 1920-44 has suddenly gone down to about 23 thousands due apparently to shortage of pasture. Goats have been going down in number since 1935 when they were 1.94 lakhs. Their number in 1951 was about 1.16 lakhs, the reduction during 1944-51 alone being about 17 per cent.

Horses and ponies are also declining in number. They were about 11,000 in 1935, 8,000 in 1944 and 7,000 in 1951. Donkeys have, however, increased during 1944-51.

The poultry have also increased from 25,000 in 1944 to 34,000 in 1951.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows :

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
278	210	21	107	31	25

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but, on the other hand, the land area *per capita*, double crop area *per capita* and the irrigated area *per capita* are steadily declining. There is, at the same time, no evidence that crop yield per acre has increased nor has there been a wide change in cropping pattern. If the present conditions do not improve it is very doubtful that the district will be able to provide food for a rapidly increasing population.

Villages and towns.

11. The district has 1,623 villages and 9 towns. Of the 10.9 lakhs of people who were counted at the census of 1951, 9.5 lakhs were found in villages and 1.4 lakhs in towns *i.e.*, there are as many as 872 people per 1,000 of the population who live in the rural areas and only 128 of them live in towns. The corresponding figures for the State as a whole are : rural 864, urban 136.

The rural population per inhabited village works out to 587. But the villages do not necessarily comprise of a single compact size. There are 4,467 hamlets in the district. The population per hamlet is only 213. The medium sized village—with inhabitants numbering between 500—2,000—is the dominant type in the district. Of the rural population 65.1 per cent. of the people live in such villages ; 17.7 per cent. live in villages of population between 2,000—5,000 ; 15.5 per cent. live in small villages of population under 500 ; and only 1.7 per cent. live in villages of population over 5,000.

Towns vary in number of inhabitants even more widely than villages. Farrukhabad city including cantonment has a population of 80,332 *i.e.*, 57.4 per cent. of the urban population. Of the urban population only 6.4 per cent. live in towns of population under 5,000 (*viz.*, Talgram, Kamalganj, Ganj Tirwa) ; 16.4 per cent. live in towns of population between 5,000—10,000 (*viz.*, Chhibramau and Shamshabad, Fatehgarh Cantonment) ; 7.6 per cent. live in towns of population between 10,000—20,000 (*viz.*, Kaimganj) ; and 69.6 per cent. live in towns of population of 20,000 and over (*viz.*, Farrukhabad and Kannauj).

It is significant to note that Farrukhabad city has registered 15.7 per cent. increase in population since 1941 while the increase since 1941 in Chhibramau has been 19.8 per cent., in Kaimganj 12.5 per cent. in Kamalganj 4.5 per cent. in Kannauj 5.2 per cent. and in-

Talgram 2.4 per cent. Shamshabad and Ganj Tirwa are declining towns. Their population has decreased by 3.8 per cent. and 7.9 per cent. respectively since 1941. (*Vide* Tables A-III and A-IV)

12. Out of the total population of 1,092,641 (rural 952,776, urban 139,865) 826,172 (rural 808,904, urban 17,268) or 75.6 per cent. depend on agriculture for their means of livelihood and 266,469 (rural 143,872, urban 122,597) or 24.4 per cent. depend on the non-agricultural sources. The following table shows the distribution of 100 persons of the total, rural and urban population of the district and also of Farrukhabad city under the different livelihood classes :

Occupations:
Livelihood
pattern

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	75.6	63.7	5.9	4.1	1.9	24.4	8.2	5.4	1.2	9.6
Rural	84.9	72.0	6.5	4.5	1.9	15.1	5.7	2.6	0.6	6.2
Urban	12.3	7.4	1.8	1.3	1.8	87.7	25.6	24.5	5.0	32.6
Farrukhabad city ..	6.5	3.5	1.2	0.5	1.3	93.5	30.0	22.7	5.7	35.1

It is obvious that this district is one of the predominantly agricultural districts of the State. Here as many as 75.6 per cent. of the people depend on agriculture as against 74.2 per cent. in the whole State.

Of the total population of the district, 706,060 persons (males 234,145, females 471,915) or 64.6 per cent. have been classified as non-earning dependants. The percentage of non-earning dependants in the agricultural population works out to 64.7 and that among the non-agricultural classes as 64.3. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 31,908 persons (males 20,961, females 10,947) or 2.9 per cent. of the population are earning dependants. Among the agriculturists their proportion is 3.07 and among non-agriculturists 2.8 per cent. The remaining 354,673 persons (males 339,438, females 15,235) or 32.5 per cent. of the population consists of self-supporting persons. Their proportion among agriculturists is 32.3 per cent. and among non-agriculturists 32.9 per cent. of the self-supporting persons 266,936 (males 259,352, females 7,584) belong to agricultural classes and 87,737 (males 80,086, females 7,651) to the non-agricultural classes. On the average a self-supporting person maintains two non-earning dependants.

Of the 87,737 self-supporting persons belonging to the non-agricultural classes 2,858 persons (rural 1,871, urban 987) earn their livelihood from non-productive sources. Of the remaining 84,879 self-supporting persons (rural 47,121, urban 37,758) 2,596 (rural 267, urban 2,329) or 3.1 per cent. are employers, 20,885 (rural 9,058, urban 11,827) or 24.6 per cent. are employees and 61,398 (rural 37,796, urban 23,602) or 72.3 per cent. are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations classified according to the Economic Divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	10,000
0—Primary industries not elsewhere specified	342
1—Mining and quarrying	6
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	1,886
3—Processing and manufacture—metals, chemicals and products thereof	255
4—Processing and manufacture—not elsewhere specified	989
5—Construction and utilities	416
6—Commerce	2,092
7—Transport, storage and communications	511
8—Health, education and public administration	1,290
9—Services not elsewhere specified	2,213

Cold storage is the principal large scale industry of the district. Among the cottage industries the principal are handloom cotton weaving, durries, calico printing, brass and

copper wares, agricultural implements, iron castings, weights, balances and cane crushers, clay modelling, basket making, *moondhas* making, *bidi* making and chewing tobacco.

Variation in the livelihood pattern

13. In this district the population dependant on agriculture was 75.3* per cent. in 1951. The unfortunate fact is that agricultural proportion has been increasing ever since 1901 when the figure stood at 60.3 per cent. It was 68.2 per cent. in 1911 and 73.3 per cent. in 1921. The actual number of persons who depend on agriculture has increased to 822,978 in 1951 from 628,253 in 1921 or by 31 per cent. while the cultivated area has remained almost unchanged. This has resulted in progressive fragmentation and sub-division of holdings and pressure in impoverished soil. There appears to have been a gradual decline in village arts and handicrafts. The cumulative result is a fall in the proportion of workers and a corresponding rise in dependency. The proportion of workers in the total population in 1951 was only 35.4 per cent. (agricultural 26.4 per cent., non-agricultural 9.0 per cent.) against 46.0 per cent. (agricultural 32.9 per cent., non-agricultural 13.1 per cent.) in 1921. The proportion of non-earning dependants has consequently increased from 54.0 per cent. (agricultural 40.4 per cent., non-agricultural 13.6 per cent.) in 1921 to 64.6 per cent. (agricultural 48.9 per cent., non-agricultural 15.7 per cent.) in 1951. All this is an index of the increasing unemployment and under-employment. It is only by the diversion of population to cottage and other industries that the present severe disequilibrium in the economy of the district can be redressed. (*Vide* Tables B-I, B-II and B-III)

Houses and households

14. There were 162,931 occupied houses in the district—141,030 in villages and 21,901 in towns. That gives an average of 6,756 persons per 1,000 houses or 6.8 persons per house in the rural areas and 6,386 persons per 1,000 houses or 6.4 persons per house in the urban areas.

There were 215,695 households in the district—187,423 in villages and 28,272 in towns. That gives an average of 5,072 persons per 1,000 households or 5.1 persons per household in the rural areas and 4,921 persons per 1,000 households or 4.9 persons per household in the

Census year				Persons per 1,000 households of	
				Rural population	Urban population
1921	4,694	4,339
1931	4,624	4,657
1941	4,691	5,203
1951	5,072	4,921

urban areas. The marginal table shows the developments in the size of the household since 1921. The rural household was almost stationary till 1941 but has considerably increased in 1951 and is now equal to the average State rural household (5.07). The urban household has registered a marked decrease since 1941.

Out of 5,072 persons in every 1,000 rural households, 2,765 are males and 2,307 females. There is male excess numbering 458 in every 1,000 households. Out of 4,921 persons in every 1,000 urban households 2,622 are males and 2,299 females. There is male excess numbering 323 in every 1,000 households.

Information regarding types of household and relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 4,972 persons (males 2,750, females 2,222) in the district. The corresponding figures for the total count is 5,051.

The table below shows the distribution by size of 1,000 sample households:

Description				Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	361	407	170	62
Rural	356	412	172	60
Urban	387	379	159	75

Medium households are the dominant type in the villages while small households are relatively more common in the urban areas. Quite a large number of migrants live in urban areas without families.

*The figure includes earning dependants according to their secondary means of livelihood while the figure of 75.6 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

Family composition of 1,000 sample households is as follows :

				Number in 1,000 households
A	{	Heads of households	{ Male (married	668
			{ Male (widowers)	289
	{	Wives of heads of households	{ Females	43
				{
				<hr/> 1,668
B	{	Sons of heads of households	1,081
		Daughters of heads of households	682
				<hr/> 1,763
C	{	Male relations of heads of households (other than sons)	597
		Female relations of heads of households (other than daughters)	782
				<hr/> 1,379
D	{	Persons unrelated to the heads of the households	Males	115
			Females	47
				<hr/> 162
Grand total				<hr/> 4,972

Sons outnumber the daughters of the heads of household. The latter leave the homes of their parents after marriage. Female relations (other than daughters) outnumber the male relations (other than sons). Such females are generally those who become member of these households by marriage. (*Vide* Tables A-I and C-I)

15. In the district as a whole the sex-ratio was 838 *i.e.*, there were 838 females to every 1,000 males. It varied among the tehsils. The lowest value was 828 in Kannauj tehsil. The highest value was 846 in Kaimganj tehsil. The ratio was 837 for Chhibramau and 840 for Farrukhabad. Sex-ratio

Contrary to trends in the State as a whole the sex-ratio in this district is smaller in villages than in towns. For the district as a whole the sex-ratio in the villages is 833 while that in towns is 873. The sex-ratio of Farrukhabad city was 859.

The corresponding figure of sex-ratio for the district was 827 in 1921, 827 in 1931, 869 in 1941 against 838 in 1951.

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately : Age structure

Age-group		Total population			Rural population		Urban population		
		Persons	Males	Females	Males	Females	Males	Females	
Infants and young children	0—4	..	13·9	7·2	6·7	7·3	6·7	6·5	7·0
Boys and girls	5—14	..	25·2	13·8	11·4	13·9	11·6	12·9	10·3
Young men and women	15—34	..	32·4	17·8	14·6	17·7	14·6	18·8	14·1
Middle-aged men and women	35—54	..	21·3	12·1	9·2	12·0	9·0	12·2	10·5
Elderly persons	55 and over	..	7·2	4·2	3·0	4·2	3·0	4·4	3·3

It will be seen that the population is progressive. 39·1 per cent. of the population is of age under 15 and only 7·2 of it consists of elderly persons. Again, it may be noted that proportionately larger numbers in the working ages (15—54) are found in the urban areas. This is the effect of migration of male workers to the towns from the villages many of whom are unaccompanied by their families. (*Vide* Table C-III).

17. Out of every 10,000 persons in the district there are 5,505 males and 4,495 females.* Marital status
Among them 2,881 males and 1,765 females are unmarried. If we reckon males and females together, the unmarried people are 46·5 per cent. of the population.

Of the males 52·3 per cent. were unmarried 40·2 per cent. were married and 7·5 per cent. were widowed or divorced. Among the females 39·3 per cent. were unmarried, 48·8 per cent. were married and 11·9 per cent. were widowed or divorced.

Of the married males 1·3 per cent. were of ages below 15, 49·0 per cent. were of ages 15—34, 39·2 per cent. were of ages 35—54 and 10·5 per cent. were of ages 55 and over. Among the married females 5·2 per cent. were of ages below 15, 61·6 per cent. were of ages 15—34, 30·2 per cent. were of ages 35—54 and 3·0 per cent. were elderly women.

*The corresponding figures for the total count are 5,441 and 4,559.

Marriage is universal. Among males and females aged 35 and over only 11·6 per cent. of the males and 0·9 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent though it is not very common. 1·3 per cent. of the males of ages 0—14 and 6·3 per cent. of the females of ages 0—14 were returned as married. (*Vide* Table C-III)

Languages

18. Over 99·8 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main are Punjabi (0·13 per cent.) and Sindhi (0·05 per cent.) Of the 10·9 lakhs of the people in the district only 1,733 or 0·2 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 1,139 or 65·7 per cent. of those who were bilingual in some Indian language. (*Vide* Table D-I).

Religion and special groups

19. Of the 10,000 population of the district the number of people belonging to different religions is: Hindus 8,766, Muslims 1,186, Sikhs 17, Jains 6 and Christians 25 of 10,000 population in villages the numbers are: Hindus 9,024, Muslims 938, Sikhs 14 and Christians 24; and of 10,000 population in towns the numbers are: Hindus 7,009, Muslims 2,874, Sikhs 40, Jains 46, Christians 29 and others 2. Muslims, Sikhs, Jains are generally concentrated in the urban areas of the district as is the case in the other parts of the State. There are 160 thousand Scheduled Castes in the district. Their number per 10,000 of population works out to 1,467. In villages they are 1,563 for every 10,000 and in towns their number per 10,000 is only 809. In the district there are 30 Anglo-Indians. (*Vide* Tables D-II and D-III).

Displaced persons

20. The number of displaced persons in the district at the census was 2,186 (males 1,154, females 1,032). Most of them were concentrated in urban areas of the district and are engaged in commerce. Of their total population in the district 93·4 per cent. came from West Pakistan, 5·8 per cent. from East Pakistan and 0·8 per cent. from districts which could not be traced. (*Vide* Table D-V).

Literacy

21. The percentage of male literacy was 19·1 in the district while that of female literacy was 4·9 only. As compared to this the percentage of male literacy in 1931 was 8·8 and that of female literacy was 1·4.* On January 1, 1951 there were 615 primary schools in the district with enrolment of 53,976. (*Vide* Table D-VII).

C—EXPLANATORY NOTE ON THE STATISTICS

1. The statistics in this volume have been presented in three parts:

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-Stock, Agricultural Machinery and Implements", from the published figures of Live-Stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of school.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follows:

Agricultural Classes—

I—Cultivators of land wholly or mainly owned; and their dependants

II—Cultivators of land wholly or mainly unowned; and their dependants

III—Cultivating labourers; and their dependants

IV—Non-cultivating owners of land; agricultural rent receivers, and their dependants

*The numbers per mille (or the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literates are as below:

Males		Females	
1951	1931	1951	1931
221	103	54	17

Non-agricultural Classes—

- V—Production (other than cultivation)
- VI—Commerce
- VII—Transport
- VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately, while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (a) *rural tracts*, comprising the rural population of each tehsil, (b) *urban city tracts*, comprising the population of areas which had been declared as cities, (c) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

- Part I-B—Subsidiary Tables
- Part II-A—General Population Tables
- Part II-B—Economic Tables
- Part II-C—Age and Social Tables

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Table A-I—Column 5 relating to “hamlets” has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a “hamlet”.

A clear distinction has been made in this census between a “House” and a “Household”. A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under “Occupied Houses” used to be that of households, while the figures under columns 7—9 of the present table refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for this census are given in Part II-B of the Report.

Table B-I Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

- (i) Self-supporting persons ;
- (ii) Non-earning dependants ; and
- (iii) Earning dependants

These were defined in the Instructions to Enumerators as follows :

“A ‘self-supporting person’ is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be ‘self-supporting’ a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a ‘self-supporting’ person in this sense is a ‘dependant’. A ‘dependant’ may be either an ‘earning dependant’ or a ‘non-earning dependant’. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an ‘earning dependant’. A person who does not earn any income either in cash or kind is a ‘non-earning dependant’. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a ‘non-earning dependant’. Each of them should be classed either a ‘self-supporting person’ or an ‘earning dependant’ according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her economic status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such.”

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family household. But they do not include “unpaid family workers” or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups :

(a) All self-supporting persons of Agricultural Class IV.

(b) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

- (i) Persons living principally on income from non-agricultural property ;
- (ii) Persons living principally on pensions, remittances, scholarships and funds ;
- (iii) Inmates of alms-houses and recipients of doles ;
- (iv) Beggars and vagrants ; and
- (v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the *secondary means* of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—“Employers”, “Employees” and “Independent Workers” have been defined as follows in the Instructions to Enumerators :

An “employer” is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an “employer” merely for that reason.

An “employee” is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents etc., and in that capacity control other workers. Such persons are also employees only and should not be regarded as ‘employers’.

An “independent worker” means a person who is not employed by any one else and who also does not employ anybody else in order to earn his livelihood. (Sweepers, *dhobies*, *kahars* etc., who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes “employee”. Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g., under a factory, they become “employees”.)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age-return and have not been smoothed.

Tables D-V (i) and (ii)—For the purpose of these tables a “displaced person” has been defined as follows :

“A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan.”
